REACH (The Registration, Evaluation, Authorization, and Restriction of Chemicals)

This directive applies to all chemical and chemical containing substances, preparations or articles exported to the European Union.

It combines over 40 different chemical legislations into 1 chemical policy for manufacturers to adhere to. It is based on the manufacturers, exporters and downstream users to avoid using substances that adversely affect human health or the environment.

The REACH authorization list contains Substances of Very High Concern (SVHC) and is regularly updated and expanded (about every 6 months). The European Chemicals Agency must be notified of the SVHCs in substances imported in excess of 1 tonne or more per year and if the SVHC is present in greater than 0.1% of the mass object.

Bay Corporation can issue a compliance statement based on the current REACH directive database upon request.
